

JIRA Story: Push Notification Feature for News Application

In the News Application, the Push Notification feature allows users to receive timely notifications about news updates based on their selected topics of interest. This feature enhances user engagement by providing personalized, real-time notifications that bring users back to the app to view trending or breaking news. Below is a detailed JIRA story for implementing this feature in the mobile app.

Story Details

Title: Push Notification Feature for News App

Story ID: NEWSAPP-202

Assignee: To Be Assigned

Priority: High

Sprint: Sprint 7

Description

As a user,

I want to receive push notifications based on my selected topics of interest,

So that I can stay updated with the latest news directly on my mobile device.

Acceptance Criteria

1. ****Push Notification Settings****:

- Users can select topics of interest (e.g., Sports, Politics, Technology) in the app settings.
- Users can enable or disable notifications for each selected topic.

2. ****Notification Delivery****:

- Notifications are triggered based on trending or breaking news within the selected topics.
- Notifications should display the headline, a brief description, and a thumbnail (if available).
- Clicking on the notification opens the related news article in the app.

3. ****Frequency and Timing****:

- Notifications are sent no more than 3 times per day per topic to avoid overwhelming users.
- Users can set a 'Do Not Disturb' (DND) period to silence notifications during specific hours.

4. ****Edge Cases****:

- If a user selects conflicting DND periods, the most restrictive time applies.
- If no topics are selected, a message should inform users that they will not receive notifications.
- Users should receive notifications only when the app is not in focus or open.

5. ****Success and Failure Scenarios****:

- Successful delivery should display a notification with full content.
- If a notification fails to deliver, it should retry up to two times and log an error if unsuccessful.

Additional Notes

- Ensure compatibility with both iOS and Android push notification standards.
- Notifications should respect user privacy settings and app permissions.
- Ensure battery efficiency by optimizing notification delivery and frequency.
- Implement analytics to track notification open rates, engagement, and topic popularity.
